# Weekly Influenza Surveillance Summary

WEEK 12: March 17- March 23, 2019

March 29, 2019

### Overview

Influenza surveillance for Kane County Health Department includes the collection of data from hospital emergency rooms, laboratories, and public schools. Our participants have reported the following aggregate measures:

- Among five reporting hospital emergency rooms, 7.6% of visits were for influenza-like illness (ILI).<sup>1</sup>
- During Week 12, 6 labs reported that 283 of 872 (32.5%) specimens tested for influenza were positive.<sup>2</sup> Of these 283 specimens:
  - 267 (94.3%) were positive for Influenza A
  - 15 (5.3%) were positive for Influenza B
  - 1 (0.4%) was positive for Influenza A/B

No other specimen tested positive for the week ending on March 23, 2019.

- The ILI absenteeism rate for public schools in Kane County was 0.36%. No public school was closed due to increased ILI activity.
- As of the week ending March 23, there were 36 influenza-related ICU admissions reported to the health department. One influenzaassociated pediatric death has been reported.
- To date, 4 outbreaks of influenza have been reported in Long-Term Care/Assisted Living facilities in Kane County.

<sup>1</sup>Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

<sup>2</sup>Rapid influenza testing cannot distinguish influenza infections caused by novel influenza A viruses. The sensitivity of this type of testing has been shown to range between 20-100% for seasonal influenza viruses. A negative result does not exclude influenza virus infection.

\*All data are provisional

## **Emergency Room Visits**

During Week 12, 7.6% of reported hospital emergency room visits were for influenza-like illness (ILI).<sup>1</sup>

Each week, data for the 2018-19 season will be presented with data from the previous flu seasons to show the trend of ER visits for ILI over time.

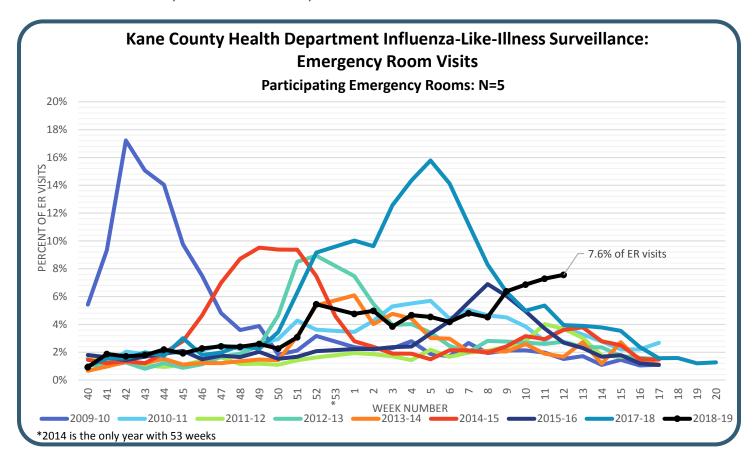

Visits for influenza-like illness to reporting emergency rooms during Week 6 had the following age distribution:

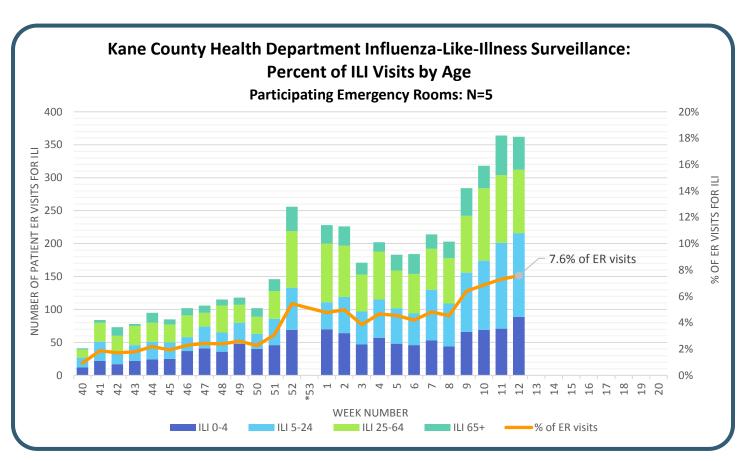

0-4 years: 24.6% of all ILI visits
5-24 years: 35.1% of all ILI visits
25-64 years: 26.5% of all ILI visits
65+ years: 13.8% of all ILI visits

Throughout the season, KCHD will provide updated information on the total number of people visiting the emergency room for ILI, and what age groups make up those visits.

<sup>&</sup>lt;sup>1</sup>Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

<sup>\*</sup>All data are provisional

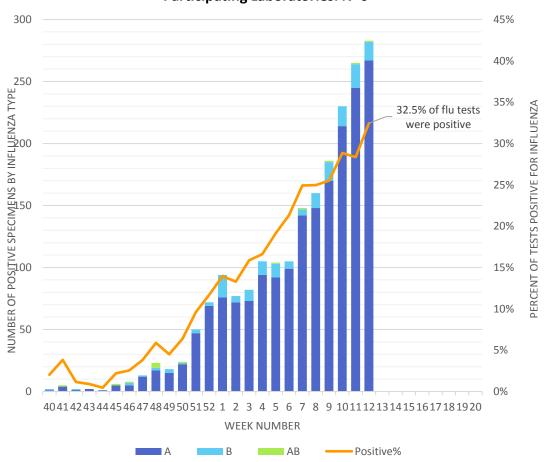

## **Laboratory Tests**

Kane County Labs (6)	Week: 11		Season Total	
	Number	Percent	Number	Percent
Specimens Tested	872		12079	
Specimens Positive	283	32.5%	2065	17.1%
Positive Specimens by Type				
Influenza A	267	94.3%	1893	91.7%
Influenza B	15	5.3%	159	7.7%
Influenza AB	1	0.4%	13	0.6%
Unknown	0	0.0%	0	0.0%

#### Kane County Health Department Influenza-Like-Illness Surveillance: Rapid Influenza Tests

#### Participating Laboratories: N=6

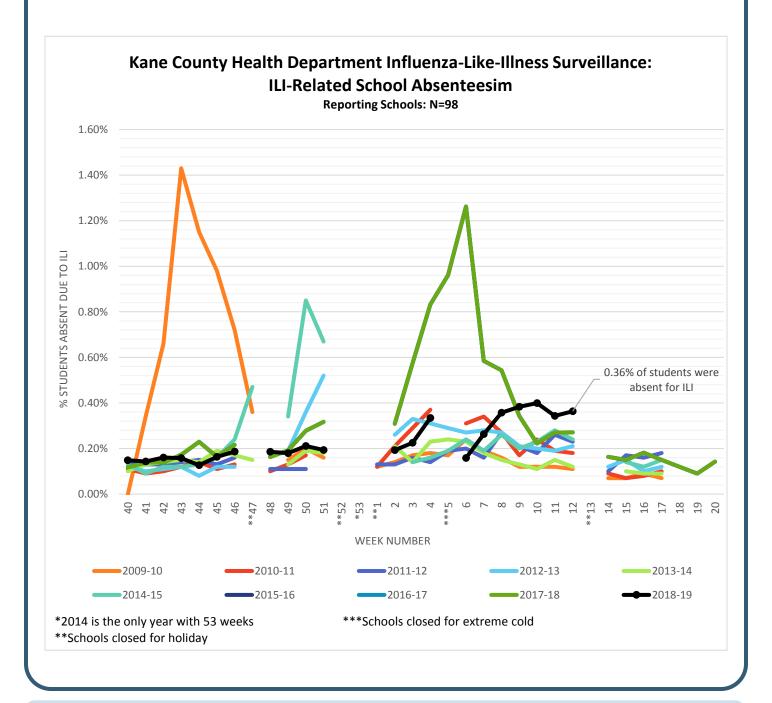

Rapid influenza testing cannot distinguish influenza infections caused by novel influenza A viruses. The sensitivity of this type of testing has been shown to range between 20-100% for seasonal influenza viruses. A negative result does not exclude influenza virus infection.

\*All data are provisional

## Student Absenteeism

The ILI absenteeism rate for public schools in Kane County was 0.36%. No public school was closed due to increased ILI activity.

Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

<sup>\*</sup>All data are provisional

#### A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists\*

Week Ending Mar 23, 2019 - Week 12

<sup>\*</sup>This map indicates geographic spread and does not measure the severity of influenza activity.

No Activity: No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.

Sporadic: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak

has been reported, but there is no increase in cases of ILI.

**Local**: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region

of the state.

Regional: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less

than half the regions of the state with recent laboratory evidence of influenza in those regions.

Widespread: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the

regions of the state with recent laboratory evidence of influenza in the state.
