Kane County System of Care Seeks Input on Mental Health Issues

The Kane County System of Care is collecting data from youth, parents and mental health professionals to guide local change to improve mental health services. The group has created a HIPAA compliant database to collect information from community members. If you are a parent/caregiver with a child who has mental health concerns or a professional working with children, youth and families, the Kane County System of Care wants to hear from you.

Incentives are offered for your participation. To register in the database go to <https://is.gd/KCHDSurvey> and use referral code: PR1

The Kane County System of Care is a coordinated network of community providers and parents that is led by the Kane County Health Department. Their goal is to improve mental health outcomes for children and families. The System of Care approach combines a broad array of individualized services that are community based, family driven, youth guided, culturally and linguistically competent and data informed.

For questions regarding the Kane County System of Care contact Anna Czerniak, Children's Mental Health Program Manager at czerniakanna@co.kane.il.us.
